COMPANY PROFILES

VIETNAM HAS BECOME AN IMPORTANT PRODUCTION BASE FOR CHINESE SPINNING MILLS

**To improve the delivery capacity of the supply chain,
better meet customer needs and be able to provide better
but more efficient services, many spinning mills are investing
heavily in Vietnam. Here are three of them.**

XINAO

**For XINAO, it is essential to gradually build up an international marketing
network and realize its overseas production capacity.**

The first overseas production base - the main factory for the first phase of the XINAO Vietnam project - was successfully completed in early May 2024, and the whole project is now progressing in an orderly fashion. The first phase is scheduled to be fully operational by June 2025, to improve the delivery capacity of XINAO's overseas supply chain and better meet customer needs.

The company's development strategy is to follow the directions of sustainable development and continue to explore new fields, use new materials, and develop new technologies to give new impetus to traditional industry.

SÜDWOLLE

**On the international market, the SÜDWOLLE Group also demonstrates
an ambitious strategic vision. To better serve its international customers,
Südwolle established a production base in Vietnam
and successfully launched its Vietnamese dye house last year.**

Vietnam has become an important part of the Südwolle Group's global structure due to its geographical location, political and labor advantages, and high-quality textile industrial resources.

By investing in Vietnam, the Südwolle Group is able to provide better and more efficient services to its customers worldwide.

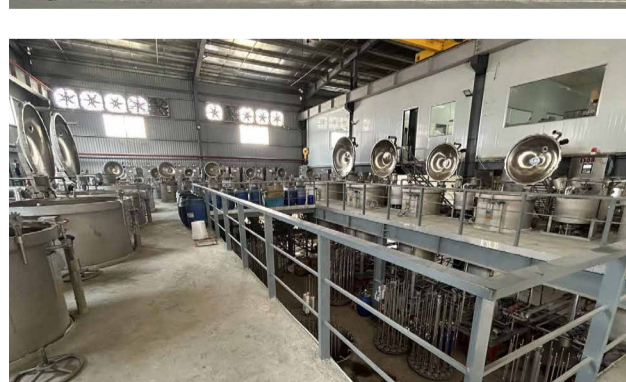

In addition, Südwolle pays great attention to the development of innovation and intelligence. In terms of plant construction and system operation, they continue to introduce advanced intelligent technology to improve production efficiency and service quality through automation, digitization, and intelligence.

This not only tackles the problem of labor shortages but also improves the controllability and stability of the production process and guarantees reliable product quality and delivery times.

ZHONGXIN

**For Zhongxin, to pursue a more international development strategy,
the Group has invested in the establishment
of Zhongxin (Vietnam) Textile Co. Ltd. in Binh Duong, Vietnam.**

The Binh Duong production base covers a total area of 4.2 hectares and represents a total investment of 100 million yuan, covering a full range of production lines for fancy yarn, semi-worsted, cylindrical yarn dyeing, bulk fiber dyeing, and other types of dyeing and spinning. The first phase of the project is scheduled to start in July 2024. As the third-largest overseas production base, after the Zhongxin and Quzhou Jiangshan headquarters, this overseas expansion will more effectively enhance the Group's production capacity and offer customers better, more efficient service.

The Autumn/Winter 25-26 collection fuses different yarn textures and characteristics for a kind of free-living thinking that the spinning mill wants to present. Integrating this kind of art into yarns gives them greater vitality. Zhongxin presents creative, richly layered, textured mid- to high-end products with composite yarn types, the use of recycled fibers and more environmentally friendly natural fibers, different production processes, and multidimensional integration.

PREREGISTRATION IS MANDATORY
