27 FEBRUARY 2025: 9.00 AM - 4.00 PM

## BEST SHAN

INTRODUCES INNOVATION IN THE FIELD OF PAPER YARNS AND SUSTAINABLE MATERIALS

**As an industry leader, BEST SHAN continues to innovate with a focus on sustainability, using advanced technologies and eco-friendly materials to meet the highest standards.**

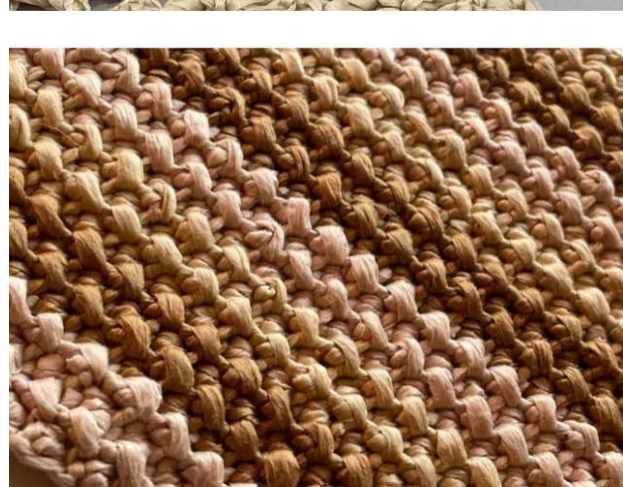

**Velvic-12 - 1/12nm, 32% Cupro Paper, 47% Cotton, 21% Rayon**

Although Chinese paper and Japanese Washi yarn share a similar look and hand feel, their performance differs due to their fiber structures.

Chinese paper yarn, made from pulp with short fibers, is less durable but offers an attractive texture and affordability. In contrast, Japanese washi yarn, made from Manila hemp with long fibers, provides superior tensile strength, resilience, and longevity, making it ideal for high-wear applications.

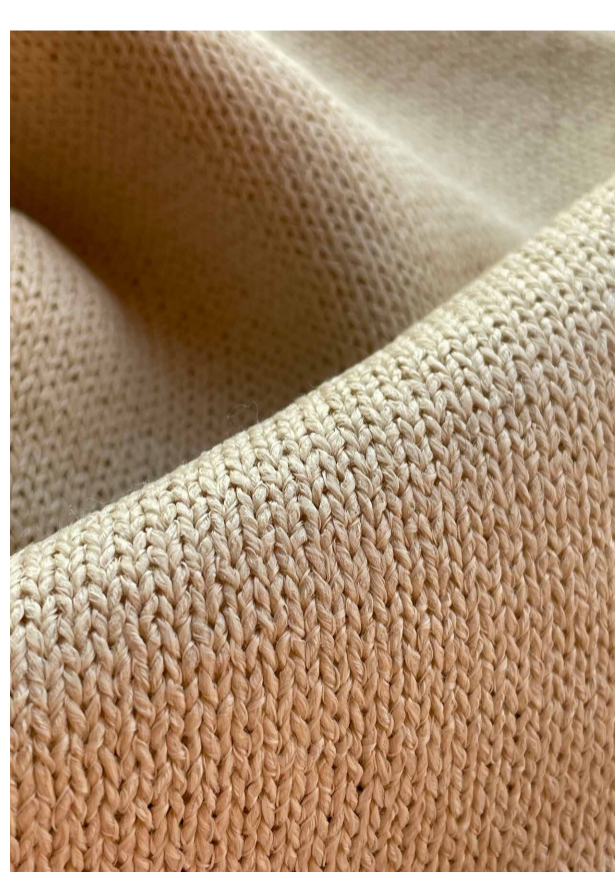

Building on its expertise in paper yarns, Best Shan is leveraging its technologies and craftsmanship to introduce its latest innovation, Cupro Paper, a sustainable non-woven fabric made from cotton linter developed in collaboration with Asahi Kasei. Cupro paper combines the traditional aesthetic of paper yarns with cupro's advanced properties, creating a luxurious, breathable, and environmentally friendly material. This new material reflects Best Shan's commitment to quality and sustainability from cutting to the final product, like paper yarn. Taking innovation a step further, Best Shan proudly introduces a groundbreaking new yarn called Cupro Raffia. Designed as an alternative to traditional raffia, it offers enhanced sustainability and style, making it ideal for hand-knitting and eco-conscious creations.

**Cupro Raffia - 100% Cupro made for handknitting**

Renowned for its expertise in managing every step of paper yarn production, cutting to the final product- Best Shan is committed to delivering high-quality, eco-friendly materials that meet the demands of modern fashion.

Nowadays, paper yarns are widely available in the market, varying in raw material origins and price ranges. While Best Shan offers Chinese paper yarn and Japanese washi yarn to meet diverse customer needs, the company primarily focuses on Japanese Washi yarn due to its superior quality and durability.

**Velvic-62 - 1/6.2nm, 32% Cupro Paper, 47% Cotton, 21% Rayon**

**Papillon - 1/8nm, 55% Cupro Paper, 45% Nylon**

Cupro offers numerous benefits, making it a standout choice for sustainable fashion. It is biodegradable, compostable, and environmentally safe, perfectly suited for eco-conscious applications. Even in warm climates, it is highly breathable and comfortable, ensuring freshness and dryness with excellent moisture absorption. Its silky, luxurious texture is smooth to the touch, while good wrinkle resistance reduces the need for ironing. Its high heat resistance also withstands processing demands, and superior dyeability delivers vibrant, consistent colors, cementing its place as a preferred material for sustainable fashion.

We offer many specifications including customize requests from 10mm,15mm, 20mm, 3mm etc...

**PREREGISTRATION IS MANDATORY**
